

Vegetarian Enzyme Complex™ has been designed exclusively for Futurebiotics® by the International Enzyme Foundation. It contains 7 enzymes, including lactase, which aids in the digestion of milk products in the dairy-intolerant, plus cellulase to breakdown fibrous cell walls in plant foods. In addition, it includes potent Lactospore®, a naturally microencapsulated sporiferous preparation of *Lactobacillus sporogenes* that is proven to deliver viable lactobacilli to the intestine. Lactospore® is room-temperature stable and highly resistant to the action of heat, gastric acids and bile.

Enzyme activity is determined and reported according to standard Food Chemical Codex procedures.

Lactospore® is a registered trademark of Sabinsa Corp.
