

Vitamin D is a fat-soluble, essential nutrient for the body. Vitamin D is produced through skin exposure to sunlight, which triggers vitamin D synthesis; however, despite the importance of the sun to vitamin D synthesis, many experts agree it is wise to limit sun exposure to the skin. Supplemental vitamin D is another option in helping to replenish vitamin D status.

Futurebiotics® Vitamin D3 supplies 2000 IU of vitamin D3, the preferred form. And, Futurebiotics Vitamin D3 is solubilized in oil for better absorption. Research has shown that vitamin D supports bone, colon, muscle, immune and breast health.*
