

MUSCLE FEAST

Glutamine is considered to be the most abundant amino acid in the body. While the body can make enough glutamine for its regular needs; physical stress from extreme exercise can demand more glutamine than what the body can produce on its own. Because it's in such high demand, it's important to supplement with glutamine. In addition to being essential to the body's gut and immune system, it makes up 60% of the free-form amino acids floating in skeletal muscles. Furthermore, it plays a very important role in protein metabolism, making it an essential choice for athletes.

SUGGESTED USE:

As an adult dietary supplement, take one serving (6g) in 6-8 oz. of water or flavored beverage, 2-3 times per day or as needed.

**MIX 1 LEVEL (6g)
SCOOP WITH 8 OZ.
WATER OR BEVER-
AGE OF CHOICE.**
