Supports Endurance & Immune System Function*

DMG is a naturally occurring derivative of the amino acid glycine which supports the body's metabolic processes and promotes neurological and brain function. It also helps support immune system function and better utilization of oxygen at the cellular level.*

DMG

is a
nutrient
produced

naturally in the cells
of both plants and
animals. The human
body produces DMG in
only limited amounts, and
just minimal amounts of this
nutrient can be found in
certain foods.
