

There are many blood pressure products on the market, but how many of them are backed by human clinical trials?

AmealPeptide®, featured in **Ameal BP®**, is one of the few ingredients that has repeatedly proven its efficacy. In fact, several published human studies have shown that AmealPeptide® helps maintain both systolic & diastolic blood pressure levels already within a healthy range.*

AmealPeptide® is produced from milk protein through a proprietary fermentation and enzymatic process that releases very small proteins called tripeptides, making them available to the body. AmealPeptide® consists of two tripeptides — VPP & IPP — that work by blocking an enzyme to help promote normal blood flow.*
