

A joint is the place where two bones are connected. The bones are covered with a layer of slippery cartilage, which enables them to glide against each other seamlessly. Unfortunately, through the normal aging process, the cartilage begins to wear out, impairing easy movement.

Cartiflex™ features two clinically tested ingredients: **BioCell Collagen®** and **chondroitin sulfate***. These ingredients have been shown in numerous double-blind, placebo-controlled human clinical trials to:

- Improve joint flexibility and mobility*
- Help cushion and lubricate the joints*
- Promote a more active daily life*

BioCell Collagen is a patented ingredient whose composition is similar to your own joints. In addition to providing highly absorbable hydrolyzed type II collagen peptides (the main type of collagen in joint cartilage), it contains hyaluronic acid (which lubricates the joints) and chondroitin (which supports the matrix structure of cartilage)*. For even greater benefit, Cartiflex also includes extra chondroitin sulfate.
