

Magnesium is a mineral that is essential for more than 300 biochemical reactions in the body, including blood glucose control, protein synthesis, energy production and carbohydrate metabolism. In addition, it plays a critical role in calcium metabolism. Low serum levels of magnesium have been found to result in low serum levels of calcium, which affects proper bone growth. Magnesium is also involved in the active transport of calcium and potassium across cell membranes, which is important to nerve impulse conduction, muscle contraction, and normal heart rhythm.*

Futurebiotics® Magnesium provides 400 mg of this essential mineral in each easy-to-swallow vegetarian capsule.
