

Regular exercise and a healthy diet with enough calcium helps all women approximately 11 to 35 years of age maintain good bone health and may reduce their high risk of osteoporosis later in life.

For persons with a family history of osteoporosis, menopausal women, or elderly men and women, adequate calcium intake is linked to reduced risk of osteoporosis through the mechanism of slowing the rate of bone loss. Adequate calcium intake is important but daily intakes above 2000 mg are not likely to provide any additional benefits.

Conforms to USP <2091> for weight. Meets USP <2040> disintegration for maximum bioavailability.

TAMPER EVIDENT: Do not use this product if imprinted foil seal under cap is broken or missing.

Keep tightly closed.

Store at room temperature: 59°-86°F (15° to 30°C).

KEEP OUT OF REACH OF CHILDREN.

TWO TABLETS PROVIDE: 630 mg calcium, 63% of the daily value.
