

Support a Healthy Brain and Metabolism with L-Tyrosine†

L-Tyrosine is a non-essential amino acid synthesized in the body from the essential amino acid phenylalanine. L-Tyrosine is the direct precursor to several important neurotransmitters which affect many functions in the brain, including mood, stress response, mental function, satiety and sex drive.† L-Tyrosine is also an important component of hormones that are produced by the thyroid, which in turn, are key for supporting metabolism.† L-Tyrosine is required to form melanin, the dark pigment present in the skin to shield the body from the harmful effects of ultraviolet light.†

Store in a cool, dry place.
