

FISOL™ contains a pure, highly concentrated, cold water fish oil with 50% omega-3 essential fatty acids:

- 30% EPA (eicosapentaenoic acid)
- 20% DHA (docosahexaenoic acid)

Supportive but not conclusive research shows that consumption of EPA and DHA omega-3 fatty acids may reduce the risk of coronary heart disease (see nutrition information for total fat content).

Research confirms the important role of omega-3 fatty acids in maintaining healthy blood triglyceride levels, plus supporting the heart, skin and joints.*

FISOL supports ocean ecosystems by using sustainable source fish from Alaskan waters.
