MAY REDUCE THE RISK OF CORONARY HEART DISEASE

Consumption of Omega-3 fatty acids may reduce the risk of coronary heart disease. FDA evaluated the data and determined that although there is scientific evidence supporting the claim, the evidence is not conclusive.

Omega-3 fatty acids also help maintain triglyceride levels. EPA and DHA are key Omega-3s important for heart health.¹

The enteric coating reduces the fishy odor and after taste by protecting the softgel until it reaches the lower intestine.

Supplement Facts

Serving Size 3 softgels
Servings Per Container 66

Amount Per Serving	% DV
Calories 30	
Calories from Fat 30	
Total Fat 3 g	5%**
Saturated Fat 1 g	5%**
Polyunsaturated Fat 1 g
