

- **Innovative 3 Stage Delivery***
- **Immune Support / Digestive Health***

Stage 1 - Prebiotic Release

TriActive releases a liquid prebiotic into the stomach where it balances the pH in the gut, discourages the growth of unfriendly bacteria, and establishes a path of food for the probiotic.

Stage 2 - Probiotic Protection

The inner capsule of TriActive's probiotic is protected from degradation and travels past the stomach.

Stage 3 - Probiotic Multiplication

TriActive probiotic is released into the intestine where the prebiotic has established a pathway of food for it to flourish. This creates an environment that allows for CFU multiplication, providing a higher level of benefit.

Featuring Advanced Probiotics

Probiotics are organisms such as bacteria or yeast that are believed to improve health. Researchers believe that some digestive disorders happen when the balance of friendly bacteria in the intestines becomes disturbed. Probiotics can improve intestinal function and maintain the integrity of the lining of the intestines. These friendly organisms make up 70% of the human immune system.

Supplement Facts

Serving Size: 1 Veggie Capsule
Servings Per Container: 30

Prebiotic	Amnt per serving	%DV
Fructooligosaccharides 95% FOS	53mg	†

Probiotic	Amnt per serving

What is the TriActive Advantage?

- **14 Different Strains & Strengths***
- **6 Billion Live Cultures per Capsule***
- **Method for CFU Multiplication***

TriActive Biotics, features Capsule-in-Capsule technology which is superior to other brands.

Our prebiotic releases in the gut where it flourishes, unlike competing delayed release (D/R) caps. Probiotics release in the Prebiotic filled small intestine for superior nutrient absorption.

14 Strains of Probiotics are used covering all aspects of probiotic needs. This ensures consumers get the full spectrum of health benefits.
