

GNC's Product Development Scientists were challenged to create an advanced delivery form of amino acid supplements, a critical sports nutrition component that can be used in the regimen of top athletes. The result of these research efforts led to the creation of the RapidDrive™ Amino Series, a core group of superior and fast-absorbing amino acids for rapid muscle fueling results. This unique technology is much more advanced compared to regular amino acids. Because our team is dedicated to continually improving sports nutrition products, the Pro Performance® RapidDrive™ Amino Series helps you, the athlete, get fast fuel for your muscles.

Pro Performance® RapidDrive Arginine 5000™ features our most advanced RapidDrive™ Amino Acid Technology. This formula has been scientifically designed to provide your body with 5000 mg of Arginine that has been pulverized, or "micronized," from large molecules into smaller particles that are easier to absorb and deliver fast fuel for powerful performance.\* Arginine is a crucial part of the nitric oxide pathway which helps to maintain blood vessel tone, this key amino acid is also used by the body to make creatine and fuel the muscles.\*
