

GNC's Product Development Scientists were challenged to create an advanced delivery form of amino acid supplements, a critical sports nutrition component that can be used in the regimen of top athletes. The result of these research efforts led to the creation of the RapidDrive™ Amino Series, a core group of superior and fast-absorbing amino acids for rapid muscle fueling results. This unique technology is much more advanced compared to regular amino acids. Because our team is dedicated to continually improving sports nutrition products, the Pro Performance® RapidDrive Amino Series™ helps you, the athlete, get fast fuel for your muscles.

Pro Performance® RapidDrive Post-Workout Amino Complex features our most advanced RapidDrive™ Amino Acid Technology. This formula has been scientifically designed to provide your body with the most important amino acids needed after exercise.* These ingredients have been pulverized, or "micronized", from large molecules into smaller particles that are easier to absorb and facilitate maximum muscle replenishment.* It features micronized glutamine to replenish glutamine levels depleted by intense exercise and to provide fuel for muscle function, nitrogen balance and an anticatabolic effect.* It supplies a micronized BCAA blend of leucine, isoleucine and valine to help reduce protein breakdown, preserve glycogen stores and stimulate muscle protein synthesis.* This advanced formula also includes micronized arginine, a key amino acid involved in the tissue repair process; electrolytes (potassium and chloride) to replace those lost during exercise, help maintain fluid balance and prevent muscle cramping; and the antioxidants vitamin C and green tea to fight against oxidative stress formed from intense exercise, along with alpha-lipoic acid to support antioxidant regeneration.*
