ActiFruit™ Has More PACs

Proanthocyanidins (PACs) are a class of flavonoids found in fruits and seeds that provide antioxidant benefits. But not all antioxidants support urinary tract health. A-type PACs from cranberries provide urinary tract benefits.*†

Cranberries contain Type-A Proanthocyanidins (PACs), which are the key actives in cranberries.

ActiFruit is standardized from unique varieties of cranberry, including *Early Black*, with a higher natural content of PACs than other varieties of cranberries.

ActiFruit delivers more PACs
