

The seed makes the difference. Our original glucosinolate (glucoraphanin) is a constituent of our proprietary broccoli seed variety. Our 'patent', PVP, seed is bred by natural selection (non-GMO) and contains significantly higher glucoraphanin content than conventional broccoli seed. On ingestion, Vitalica converts to sulforaphane in the body. The original Vitalica activates Phase II enzymes, protects DNA from free radicals, and promotes immune system health.*
