1500 MG • **BOOST ENERGY AND FAT BURNING**

ENHANCED FAT METABOLISM

L-Carnitine is an amino acid responsible for shuttling fatty acids into the mitochondria for energy production. Enhanced mitochondrial activity results in an increase in clean energy and a boost to fat burning. ✓

CONVERT STORED FAT TO ENERGY

- ENERGY STORED AS FAT
- CARNITINE SHUTTLES FAT CELLS TO MITOCHONDRIA

- MITOCHONDRIA CONVERTS FAT INTO ENERGY

- INCREASED FAT BURNING & ENERGY

STIMULANT FREE FAT BURN

L-Carnitine can be a stimulant-free source of energy that supports increased fatty acid metabolism. Carnitine is a great alternative to synthetic fat burners that rely on stimulant-heavy formulas for increased metabolism. ✓

ACTIVE DOSE

Our L-Carnitine contains a biologically active dose of 1500mg per serving. Although low levels of Carnitine can be found in a number of natural sources, a threshold dosage must be met to experience the performance enhancing benefits of L-Carnitine. ✓
