

Calcium is the primary mineral responsible for strong bones.* The body also uses Calcium for proper muscle contraction, nerve function and heart function.* Vitamin D assists in Calcium absorption and maintaining a healthy immune system.* Because the body cannot produce Calcium, a balanced diet, regular exercise, healthy lifestyle choices and adequate intake of Calcium and Vitamin D can play a role in maintaining optimal bone health.*

**Adequate Calcium as part of a healthful diet, along with physical activity, may reduce the risk of osteoporosis in later life.
