

Niacinamide is the "non-flush" version of the nutrient Niacin (vitamin B3). It is key in hundreds of metabolic reactions. Every process in every cell of the human body relies on the energy-producing reactions of Niacin. It is used by the body for the synthesis of proteins and fatty acids as well as the formation of hormones and red blood cells. Most importantly, Niacin is an important regulator of white blood cells, needed for a strong immune response.*

IN A SPECIAL BASE WHICH PROVIDES FOR THE GRADUAL RELEASE OF INGREDIENTS OVER A PROLONGED PERIOD OF TIME.

MICRO-GEL SUSTAINED RELEASE SYSTEM
