

Copper aids in the formation of bone, hemoglobin and red blood cells; it works in balance with zinc and vitamin C to promote the formation of elastin, an important skin protein. It is a vital component of several enzymes involved in energy production, immune system function, red blood cell formation and connective tissue maintenance. Copper promotes cardiovascular health, nervous system function, cellular metabolism and iron absorption.\*

Free from artificial colors and artificial preservatives.

**KEEP TIGHTLY CLOSED IN A COOL, DRY PLACE.**
