

Acetyl-L-Carnitine (ALC) is a naturally occurring nutrient in the body that is involved in the metabolism of fatty acids into the universal energy molecule ATP. ALC supports the biosynthesis of acetylcholine, a key neurotransmitter for brain and nerve cell functions which regulates activities of the vital organs, blood vessels, and communication between nerves and muscles.* ALC also supports levels of glutathione, a significant antioxidant sustaining neurons and protecting cellular components from superoxide radicals.*

Helps metabolize fatty acid to generate cellular energy*

Helps support neurotransmitter for brain and nerve cell functions*

Helps support neurons and protect cellular components from superoxide radicals*
