BEE MAGIC™

Propolis THROAT SPRAY

DRY CONTENT MINIMUM 6%

BIO ACTIVE

1 FL.OZ (30 ML)

WHAT IS PROPOLIS ?

Propolis is in no way a new discovery. The use of propolis goes back to ancient times, at least to 300 BC, and it has been used many parts of the world, both internally and externally. However, its use continues today in remedies and personal products, and the list of preparations and uses is endless. It is still one of the most frequently used remedies in the Balkan States (Bankova, 2005a), and it has only been in the last decades that scientists have investigated its constituents and biological properties.

Propolis is a resinous material collected by bees from bud and exudates of the plants, which is transformed in the presence of bee enzymes. Its color varies from green, red to dark brown. Propolis has a characteristic smell and shows adhesive properties because it strongly interacts with oils and proteins of the skin. In general, propolis in nature is composed of 30% wax, 50%resin and vegetable balsam, 10% essential and aromatic oils, 5% pollen, and other substances (Burdock, 1998).

Etymologically, the Greek word propolis means pro, for or in defense, and polis, the city, that is "defense of the hive". Bees use it to seal holes in their honeycombs, smooth out internal walls as well as to cover carcasses of intruders who died inside the hive in order to avoid their decomposition. Propolis also protects a bee colony from diseases while hibernation season.

WARNING:

For individual use only. Bee products may cause an allergic reaction at some individuals. Consult with your physician before usage. Avoid spraying in eyes. If you are pregnant or breast feeding consult your physician before use. Unsuitable for children under 1 year old.

KEEP OUT OF REACH OF CHILDREN.

Keep product in a shadow and dry place at a room temperature (22 °C/ 74 °F) at its original container.
