THE KRE-ALKALYN® EFX DIFFERENCE IT'S BUFFERED. IT'S STABLE. IT WORKS!*

Kre-Alkalyn® EFX represent a major breakthrough in performance supplementation thanks to its multi-patented, 'pH-Correct®' creatine stabilization technology. Our scientist discovered that "buffering" to pH-12 produced a stable creatine molecule. Kre-Alkalyn® EFX is the only creatine monohydrate product with a pH of 12 because its molecules are synthesized with 'buffering' agents using a patented manufacturing process.

FROM THE LAB TO THE GYM!†

Twenty-four elite athletes from the Bulgarian National Weightlifting Team† were selected to participate in a double-blind clinical study⁽¹⁾ comparing Kre-Alkalyn® to standard creatine monohydrate.

After 60 days, the Kre-Alkalyn® group (using 7.5g per day) experienced an overall average strength increase of 28.25% above those in the unbuffered creatine monohydrate group!

†Elite athletes using 7.5g of Kre-Alkalyn®. Individual results may vary. Referenced: (1) Stoychev K., Terziiski N. (2006). "Comparison of Kre-Alkalyn to Creatine...performance, & safety".
