Strontium is a key mineral essential for bone health. Studies indicate that strontium positively affects bone formation, strength, and healthy bone mineral density.*

Recommendations: 2 capsules daily, or as directed by your healthcare practitioner. Studies suggest that, for better bioavailability, strontium should be taken more than two hours before or two hours after taking a calcium supplement. Strontium is absorbed using calcium transport mechanisms, and should not be taken at the same time as calcium supplements.

If pregnant or nursing, consult a healthcare practitioner before using. Strontium supplementation may be contraindicated for individuals with impaired renal function.
