Agmatine Sulfate is considered by many to be a "Super Arginine."* By definition, Agmatine Sulfate is Arginine with the carboxylic acid detached.* Of particular interest to bodybuilders is Agmatine's ability to inhibit Nitric Oxide Synthase (NOS) activity, specifically iNOS and nNOS.* The result is greater (NO) expression, leading to an increased pump experience when training.* Agmatine Sulfate's growing popularity as a "must have" supplement is no accident.*

In addition to promoting overall health Agmatine Sulfate is believed to possess numerous ergogenic benefits, among them; increased luteinizing and growth hormone production, improved training performance and post exercise recovery, improved insulin sensitivity and calcium uptake, exercise endurance as well as possessing antioxidant properties.*
