

Recent research highlights the role pomegranates play in cardiovascular and general cellular health. Pomegranates, like many berries, contain a polyphenol called ellagic acid, which functions primarily as an antioxidant. In addition, a plant compound termed "punicosides" is found exclusively in pomegranates - which means you can't get them by eating any other fruit. Punicosides were shown to be significantly more powerful an antioxidant than ellagic acid alone. Our **Pomegranate Extract** contains high standardized amount of both of these beneficial compounds, including 738 ORAC units per capsule.
