

SUGGESTED USAGE: Take 2 capsules daily, preferably with food.

Pyruvate, or pyruvic acid, is a biochemical compound that's involved in a number of metabolic processes in the body, including the metabolism of fat, proteins, and carbohydrates, the storage of glycogen, and the production of cellular energy.* Pyruvate is necessary for the citric acid cycle (or Krebs cycle), which is the process through which our cells produce energy in the form of adenosine triphosphate (ATP).* ATP is the body's primary chemical fuel and powers many vital functions, including energy production, muscle contraction, and cellular fuel replenishment.*
