MICELLAR CRÈME

FRESH, NATIVE MICELLAR CASEIN

Being the major protein in milk, casein is one of the highest-quality proteins known to man. Unfortunately, inferior processing techniques can alter or denature this superior protein. Denatured caseins, such as sodium and potassium caseinate, dominate the marketplace but are devoid of the best qualities that make pure, native casein so wonderful.

Native casein, also known as micellar casein, is a special product produced in the absence of high heat and caustic chemicals through a gentle filtration method. It is easily differentiated from its denatured cousin by its superior, clean, creamy taste, and its ability to disperse instantly without becoming chalky or thick. In addition, micellar casein has superior health-inducing properties by optimizing muscular and whole-body recovery and repair.

Micellar Crème is the epitome of excellence for a casein protein product. It contains fresh, native micellar casein that is untainted with inferior caseinate salts. Micellar Crème mixes instantly with a spoon, has a creamy, smooth mouthfeel and tastes just like a real milkshake.

INGREDIENTS: Micellar casein, dutch processed cocoa powder, natural and artificial flavors, silicon dioxide, salt, acesulfame-K, sucralose.

CONTAINS: Milk. Produced in a facility that uses egg, soy, wheat and peanut products.

SUGGESTED USE: Based on taste preference, vigorously mix one scoop of Micellar Crème per 6–10 oz of water or milk for 30–60 seconds. For those with lower protein needs, one half scoop may be consumed with 3–5 oz of water or milk. Note the extra calories when combined with milk. Consume Micellar Crème two to three times per day to satisfy your protein requirements. Remember, the best times for consuming protein are immediately upon rising in the morning, after intense physical activity, such as weight training, and prior to sleep. Micellar Crème mixes instantly with a spoon and tastes great...**GUARANTEED!**

Notice: Use this product as a food supplement only. Do not use for weight reduction.

Every Micellar Crème contains a FreshShield™ sachet which removes all oxygen inside the package leaving only inert gases, such as nitrogen. Without oxygen, these inert gases envelop and protect the delicate protein powder and flavoring molecules from oxidation, rancidity, and bacterial growth. Our proteins are unique in their ability to have the same quality and taste from the day of manufacturing to the "best by" date.
