Nature's First Food

Since the dawn of time, mother's colostrum ("first milk") has sustained and nurtured their newborns. This rich source of immunoglobulins, peptides (lactoferrin & lactoperoxidase), signaling molecules (cytokines, proline-rich polypeptides), beneficial bacteria, and growth factors support the newborn's healthy immune and gastrointestinal health.

Alternative Colostrum Supplementation

Unfortunately, not all babies receive the benefits of human colostrum. The good news is that bovine (cow) colostrum is biologically compatible, plentiful, and a natural supplementation consideration if baby is unable to breastfeed. Today's world provides dietary and environmental factors that test a healthy immune system. Infant & Toddler Colostrum-LD® is a great choice to support your infant or toddler's nutritional needs whether they are breastfeeding or not.

Good Health is a Lifelong Endeavor

Healthy children are more likely to become healthy adults. Sovereign Laboratories encourages all parents to support their child's daily nutrition with Colostrum-LD® and give them an additional foundation for a healthy life. Colostrum can factor into supporting healthy childhood development, yet not just for the little ones. We recommend Colostrum-LD for all family members to promote immune system homeostasis and overall well-being...whether you are two hours old or 102 years old.

Recommended Usage

Mix colostrum in 4 ounces freshly purified water (not bottled water), formula, or filtered apple juice and provide twice a day. If solid foods are appropriate, add colostrum to yogurt, applesauce, or vegetable puree. Upon taking colostrum for the first time, some infants experience mild sensitivity which may result in changes to the stool color or consistency (loose stools or diarrhea). Should sensitivity occur, begin with a ¼ teaspoon for the first few feedings and gradually increase to ½ teaspoon. Discontinue use and contact your pediatrician for anything beyond minimal changes to stool color or consistency.

Supplement Facts

Serving Size: Approximately 1 Teaspoon (2g)
Servings Per Container: 170

	Amount Per Serving	% Daily Values for children 1-3 years of age*	% Daily Values for children 4 or more years of age**
