

Chlorogenic acids are found in all deciduous plants, with green (unroasted) coffee beans naturally containing a high level of these polyphenols. Chlorogenic acids have been studied for a variety of health benefits, and are especially unique for their role in healthy weight support as it has been shown to improve glucose transport in skeletal muscle. A natural blend of thermogenic factors has been included in our **Ultimate Green Coffee Bean** to the studied dosage of chlorogenic acids to enhance the body's ability to utilize energy and metabolize lipids. We verify our green coffee bean extract contains at least 50% naturally occurring chlorogenic acids.
