SCIENCE CORNER

Unroasted coffee beans are naturally green in color. Once roasted, the beans turn brown which creates the aroma and flavor that coffee drinkers are accustomed to.

Unfortunately, roasting the beans has been shown to decrease a natural substance which has been the center of attention around green coffee beans called "chlorogenic acid".

Genceutic Naturals uses 400 mg of green (unroasted) coffee bean extract standardized to contain 50% chlorogenic acids.

Store at 15-30°C (59-86°F).
Protect from heat, light and moisture.
