

Maximize Recovery & Results!

MMSN brings you **Max Glutamine**, pure HPLC tested crystalline L-Glutamine powder. Produced in the body naturally, glutamine is a "conditionally essential" amino acid and is the most abundant free amino acid in plasma and in skeletal muscles (60%). Glutamine is often depleted due to training, infection, stress, poor diet, and acute exercise. Additionally, research indicates that bodybuilders, fitness and strength athletes, and other active people often do not produce enough glutamine

within their liver to restore critical glutamine levels within a reasonable time frame following training. Glutamine is utilized at high rates by rapidly dividing cells, including leukocytes, providing critical energy for nucleotide biosynthesis. Supplemental glutamine can be utilized to repair trained muscles and support the natural production of human growth hormone, which is important to muscle recovery and gains. Glutamine can also support the health of the intestine and immune systems and allow for more intense training. Train hard and get the most from your workouts with **Max Glutamine!**[†]
