

Revolutionary Delivery System!

MMSN brings you **Max Kre-Alkalyn**, the next step in creatine delivery. The patented process used to make **Max Kre-Alkalyn** allows you to exercise more intensely by protecting your muscles from excessive lactic acid build up during hard training. By buffering lactic acid your muscles can work harder and longer. In certain environments creatine may convert to ineffective creatinine. The patented **Max Kre-Alkalyn** formula is buffered to create a new and revolutionary creatine delivery system that prevents the conversion to creatinine before reaching muscle. This patented process intensifies the effectiveness of **Max Kre-Alkalyn** allowing you to get great results while minimizing dosage and therefore the creatine related side effects of bloating or digestive problems all while still being a superior muscle volumizer. More creatine available to the body can mean better results in the gym and in the mirror. Creatine is one of the most purchased products in the supplement market today and now **Max Kre-Alkalyn** has raised the bar by producing a powerful muscle buffering, cell volumizing creatine delivery system.¹
