Potassium is an essential mineral that is widely distributed among food sources, with especially high levels present in fruits and vegetables. Potassium is critical for the maintenance of normal whole-body and cellular fluid levels, as well as for the maintenance of acid-base balance. It is also necessary for proper muscle contraction, including the maintenance of a healthy heartbeat and for the transmission of nerve impulses. Because food processing reduces the levels of naturally occurring nutrients in foods and typically high dietary sodium intake, supplementation may be necessary to ensure adequate intake.*

Caution: For adults only. Consult physician if pregnant/nursing, taking any medications (especially those that may affect kidney function or blood potassium levels), or have a medical condition (especially heart/kidney condition or diabetes). Keep out of reach of children.
