Menopause Support

Menocet

Freedom from Hot Flashes, Freedom from Night Sweats, Freedom from Mood Swings, Freedom from Irritability...

Understanding Menopause

Even in modern society, known for its medical advances and openness, there is still a lot of confusion as to what menopause is and what it means. Menopause is a physiological and psychological change similar to puberty in its magnitude.

Menopause, commonly known as "the change," is a natural stage in every woman's life signified by the end of the menstrual period. It is not a disease or something to be ashamed of.

> Menocet™ is a ground breaking herbal supplement, designed to address all four common symptoms of menopause, hot flashes, night sweats, mood swings and irritability.
