Lactofol's unique delivery technology makes it up to 60% more effective than other lactase products. The acid-resistant microcapsules inside the capsules do not dissolve and release the active, neutral lactase until they reach the small intestine. In addition, converting lactose to its fundamental components—glucose and galactose. Lactofol prevents lactase from traveling to the large intestine where it would be metabolized by local bacteria into gases that are associated with abdominal bloating and flatulence.

Lactofol™ contains lactase, the enzyme required for digestion of the milk sugar lactose. Lactofol is the first product worldwide to provide neutral lactase. Unlike acidic lactase products, which degrade lactase in the stomach, Lactofol breaks down lactase in the small intestine where this process normally takes place.

Consult your healthcare practitioner prior to use. Individuals taking medication should discuss potential interactions with their healthcare practitioner. Do not use if tamper seal is damaged.

DIRECTIONS: Take one capsule with liquid 10 minutes prior to consuming any lactose-containing food or beverage. One capsule of Lactofol™ is able to break down approximately 6.5 grams of lactose (equivalent to approximately 4 ounces of dairy milk). Adjust number of capsules as needed, or take as directed by your healthcare practitioner.
