2g of the 2.5g Saturated Fat (13 of the 35 fat calories) are MCTs (Medium Chain Triglycerides). MCTs provide energy for digestion and cannot be converted to body fat.

DIRECTIONS: Add 2 scoops (37g) Proto Whey to 3/4 cup (6 oz) cold water and shake or stir.

foods, depending on individual caloric needs.

INGREDIENTS: Proto Whey Micro Peotides from High-DH whey protein hydrolysate), maltodextrin fructose, decaffeinated coffee concentrate, lecithin

This product is accurately packed by weight. Some settling may occur during shipping. To loosen the powder prior to use, simpl

PURE HIGH-DH HYDROLYZED WHEY PROTEIN

breaking down whole proteins found in food and supplements into smaller proteins, called peptides (Micro Peptides™), and amino acids*

extent to which the protein has been broken down. Higher DH means more rapid and complete absorption.* In order to be absorbed, protein must be peptides, called di and tripeptides.

Whole proteins, including whey isolates, concentrates, caseins, soy, and blends are large proteins and naturally contain little to no Micro Peptides™ and no di and tripeptides. Proto Whey is 100% Micro Peptides,™ of which, up to 40% are di and tripeptides.*

*These statements have not been evaluated by the FDA. This product is not intended to diagnose, treat, cure or prevent any disease.

Low glycemic response.*

High-DH reduces allergenicity.* Mixes easily - no blender required.

Ondustry-leading, rich and creamy taste profile.

FOR THE SCIENCE MINDED

TARGETED PROTEIN DELIVERY

The di and tripeptides in Proto Whey* target the PEPT-1 transporter which

transports over 8,400 different di and tripeptides. Whole protein digestion relies

The speed and efficiency of the PEPT-1 transport system allows for faster

delivery of protein throughout the body and bypasses other systems that

Di and tripeptides carry metabolic information not present in amino acids.

High-DH proteins deliver protein into the blood primarily as di and tripeptides
