

TribuPlex™ is the most potent steroidal saponin complex available today. This complex is built upon a combination base of Tribulus Alatus (Standardized to 54% Saponins including stigmasteryl and beta-sitosterol) and Tribulus terrestris (an unheard of 60% or more steroidal saponins and containing large amounts of furostanols and protodioscin). Tribulus Alatus is a new form that is showing significant hormone support in lower doses.**

These steroidal saponins are the building blocks your body requires to meet the hormonal production needs without the use of andros or steroids.** Eastern European studies have shown steroidal saponins (furostanols and protodioscin) evoke dramatic effects upon anabolic hormone production.**

This complex is further complemented by a synergistic, proprietary blend of furostanol rich concentrated extracts of Diosgenin and Trigonella foenum. To round out this unique formula, **MRM** has added a complex of Schizandra berry (2% Schizandrins), Ashwagandha (1.5% Withanolides), Panax ginseng (80% Ginsenosides) and Rhodiola Rosea, powerful adaptogens that have been shown to increase performance and decrease fatigue.**
