

Pantethine is the biologically active form of pantothenic acid (Vitamin B5) and exerts benefits well beyond pantothenic acid. Pantethine is utilized by key enzymes involved in the transport and breakdown of triglycerides (fatty acids) and cholesterol.*

The breakdown of fat into energy requires the transport of fatty acids across cellular membranes. Pantethine (as a component of coenzyme A and acyl carrier protein) is essential in this process. Clinical studies demonstrate pantethine, but not pantothenic acid, can help some individuals break down fatty acids and cholesterol more effectively.*

ETI is an FDA-registered Drug Establishment.

Pantesin® is a registered trademark of Daiichi Fine Chemical Co., Ltd.
