

PRODUCT BENEFITS: A large percentage of the body's immune system is located in the gastrointestinal tract, which is also where most of the digestion takes place. Our Acidophilus Complex provides 10 billion active cultures from a combination of Lactobacillus acidophilus and B. bifidum to ensure a favorable balance of intestinal bacteria.* Probiotics support a favorable environment for duodenum-jejunum nutrient absorption, encourage gram-positive Lactobacilli intestinal balance and promote the health of the intestine.* The mechanisms through which Acidophilus acts have been attributed to factors such as production of the heat-stable protein Lactacin F, bio-enzymatic lactic acid production, acid-resistance in the alimentary tract, and positive effects on fecal enzyme concentrations.*

Directions: For adults, take one (1) capsule daily, preferably with a meal or follow the advice of your health care professional. As a reminder, discuss the supplements and medications you take with your health care providers.
