Good Health Depends on Proper Liver Function.

A Healthy Liver Cleanses the Body by:

• **Filtering the blood:** Each minute nearly 2 quarts of blood pass through the liver for detoxification. When functioning properly, it clears 99% of the impurities before blood re-enters circulation.

• **Secreting bile:** Every day a healthy liver produces a quart of bile, which carries toxins to the intestine for elimination.

• **Neutralizing toxins:** Through a complexity of enzymatic processes, a healthy liver neutralizes toxins directly or converts them into fat or water-soluble forms to be eliminated from the body.

A Healthy Liver Enables the Body to:

- Produce energy when needed
- Store key vitamins, minerals & sugars
- Manufacture new proteins
- Control cholesterol production & excretion
- Facilitate proper digestion
- Maintain hormone balance

Caution: Consult a physician before taking this product if you have intestinal or bile duct blockage, or inflammation of the gallbladder. Not recommended for pregnant or lactating women, or individuals with ulcers or gallstones.
