

Fertility Blend[®]

WOMEN

A scientifically validated nutritional blend that helps enhance fertility health. **Vitex agnus-castus** (chasteberry herb) helps support good hormone balance and normal ovulation. The **antioxidants** green tea, vitamin E and selenium, help enhance reproductive health. The amino acid **L-Arginine** helps maintain a healthy uterine lining. **Vitamins** B6 and B12, folic acid, iron, magnesium and zinc also help maintain fertility health. Adequate amounts of folic acid may reduce the risk of neural tube birth defects when consumed as part of a healthy diet - before and during early pregnancy.*

The **Daily Wellness Company** is committed to supporting scientific research on finished formulas. In a double-blind, placebo-controlled study conducted in collaboration with **Stanford University School of Medicine**, the treatment group taking **FertilityBlend[®] for Women** demonstrated a significantly higher pregnancy rate and enhanced fertility health compared to the placebo group - published in The Journal of Reproductive Medicine, 2004; 49(4): 289-93 and Clin Exp Obstet Gynecol 2006; 33C4; 205-8.

Caution: For adults only. For those with any pre-existing medical conditions, please consult a doctor before use. Accidental overdose of iron-containing products is a leading cause of fatal poisoning in children. Keep out of reach of children. In case of accidental overdose, call a doctor or poison control center immediately. Keep bottle tightly closed in a cool, dry place. Do not use if tamper-evident seal is missing or broken.

Recommended Use: As a dietary supplement, take a total of 3 capsules daily. If possible, it is best to spread the dosage out throughout the entire day. Use for at least 3 menstrual cycles before expecting a significant benefit to fertility health. **Can be taken for as long as needed to get pregnant.** You may want to have your partner take **FertilityBlend[®] for Men**. At least 50% of fertility issues are due to male factors. You may also want to check with a doctor to determine whether there are any physical causes for low fertility that can be corrected by standard medical procedures. Do not take with Clomid or other fertility drugs. **Discontinue use once pregnancy has been confirmed by a doctor.**

Lifestyle changes often are helpful in increasing chances for conception. Smoking, caffeine and alcohol consumption, excessive or insufficient body weight, and stress have all been related to reduced fertility in women. Reproductive organs are highly susceptible to free radical or oxidative damage from environmental toxicants and natural aging. A balanced, nutritional diet, and nutritional supplements with a high antioxidant content can help minimize some of this damage.*
