REASONS WHY MAGNESIUM IS CRITICAL:

- **Dietary Intake** - Up to 75% of Americans don't get enough magnesium in their diets[†]
- **Prescription Drugs** - Diuretics, proton pump inhibitors, cisplatin, and cyclosporine deplete magnesium[†]
- **Optimal Health** - Magnesium is an essential mineral needed by every cell in the body. Involved in more than 300 chemical reactions, it's critical in helping to convert carbohydrates, protein and fat into energy – helping support the formation and release of energy from cells.[†]
