

TribuPlex® 750 is a potent steroidal saponin and adaptogen complex. This complex is built upon a combination of Tribulus alatus (standardized to 54% steroidal saponins) and Tribulus terrestris (with an unheard of 60% steroidal saponins). Clinical studies have shown these steroidal saponins are building blocks that evoke dramatic effects upon anabolic hormone production without the use of anabolic steroids.**

This formula is further complemented by a synergistic, blend of concentrated extracts of Diosgenin and Trigonella foenum. Rounding out this unique formula, **MRM** has added a myriad of powerful adaptogens commonly used to increase performance and decrease fatigue to motivate athletic performance.**

- Supports Healthy Hormone levels**
- May Increase Libido and Help Build Muscle**
- Adaptogens Promote Energy and Athletic Performance**
