African Mango

EDGE diet

Origins: Irvingia Gabonensis (African Mango)
is a tree native to West Africa. The fruit of the
tree closely resembles Mango and the seeds
and leaves of the fruit have been used to
make medicine. Historically, the fruit itself
was eaten to aid with indigestion issues and
to boost energy. Recent research has shown
that the fiber the fruit produces helps to
remove cholesterol from the body, and that
the seeds may help reduce fat cell growth
and promote the breakdown of fats.
