

FAST 5™ packs the latest scientific research into a potent muscle building powerhouse. Primarily an intra-workout product, **FAST 5™** can also be used pre-workout or post-workout. It can also be used to enhance any pre-, intra-, or post-workout product. Furthermore, **FAST 5™** can be added to protein shakes and/or meals to significantly increase muscle protein synthesis.

During training, muscle protein breakdown is increased, the extent of which is dependent on amino acid availability. **FAST 5™** contains a potent combination of **PeptoPro®** (Casein Protein Hydrolysates) along with a 2:2:1 ratio of BCAAs which are used to fuel working muscles and stimulate muscle protein synthesis. This 2:2:1 Leucine, Isoleucine, Valine Ratio is a **VPX® Patent Pending** Proprietary Blend of BCAAs. Consuming the Patent Pending 2:2:1 ratio in **FAST 5™** allows you to ignite the explosive muscle building power of not only mTOR, but also GLUT4! It's the mTOR / GLUT4 Bio-Synergistic Sizzle that's going to give you the muscle and performance edge to kick butt on the field or in the gym!

FAST 5™ also reduces whole body protein breakdowns, which in turn increases recovery time and reduces Delayed Onset Muscle Soreness (DOMS). **FAST 5™** was designed with the elite athlete in mind. The revolutionary **FAST 5™** muscle building cocktail is YOUR scientific secret to packing on rock hard, ripped muscle FAST!

- **Patent Pending:** L-Leucyl-L-Isoleucine: Methods of use of Dipeptides and Tripeptides of Branched Chain Amino Acids and Derivatives
- **Patent Pending:** 2:2:1 Leucine, Isoleucine, Valine Ratio is a Patent Pending Proprietary Blend of BCAAs

Do not purchase if safety seal is broken or missing.
Store container between 15°C to 25°C (59°F to 77°F).
Product contains heat and moisture sensitive
materials which can cause clumping and settling. Shake well before opening.

Made in USA from Domestic & Imported
Ingredients in GMP State of the Art Facilities
