

Quercetin is a naturally occurring bioflavonoid compound. Quercetin serves as an antioxidant in the body and assists anti-inflammatory activities. Bioflavonoids are compounds that give color to fruits and vegetables, as well as red and rose colored wines. Quercetin is found in foods such as apples, onions, beans, green leafy vegetables and citrus fruits. It can also be found in black and green teas, red wines and red grape juices.

Bromelain, a proteolytic enzyme from pineapple, and magnesium are added to help support the body's response to inflammation.†
