How metabolic reset® Works

The key is its combination of Viscofiber®, a highly viscous and soluble oat beta-glucan, and whey protein isolate. This proprietary blend and unique formula works in the following ways:

1 Creates a Satisfying Feeling Of Fullness

Both the whey protein isolate and the Viscofiber in **metabolic reset** help increase satiety, resulting in a prolonged sense of fullness.* By avoiding feelings of hunger, you can comfortably eat less food, less often and consume fewer calories.*

2 Makes Choosing Low-Glycemic Options Easier

Hunger can make you choose foods that are quick and easy; unfortunately, convenience foods can wreak havoc on your ability to manage your weight. Because the fiber in **metabolic reset** hunger control shake will make you feel fuller and more satisfied, it can help you resist the urge to grab what's most convenient, including high-glycemic foods. So after enjoying **metabolic reset**, you'll feel like you've taken control of your hunger and will be better able to make smarter choices. Consumption of high-glycemic foods may lead to a repetitive cycle of frequent hunger and excessive cravings. Lower-glycemic index choices, including **metabolic reset**, may result in better eating and more efficient weight management.*

Common Causes of Weight Gain

Fad diets, poor eating habits, high-glycemic index foods can all make weight management challenging. These factors can also create strong cravings, which in turn, can lead to excessive calorie consumption—and may create a repetitive cycle of:

- Uncontrollable, frequent hunger
- Excessive cravings, especially for carbohydrates
- Increased conversion of blood glucose to fat
- Tiredness, low energy and irritability
