

CaliTrim™ contains a synergistic blend of potent lipotropic factors. Lipotropic factors are a supplement category that supports the liver to metabolize fat and excrete toxins. The lipotropic factors Choline, Inositol, and L-Methionine positively enhance liver function and specific chemical reactions that promote detoxification and fat metabolism. L-Taurine supports bile production, which is essential for the digestion and absorption of dietary fats. L-Carnitine is critical in all tissues for the transport of fatty acids into the mitochondria, where the cells' energy is produced. Vitamin B6 and the mineral Chromium are added to support healthy glucose metabolism. Lipotropic analogy: Lipotropic factors are like the hand that squeezes the water out of a full sponge, except here the sponge is filled with fat and toxins. CaliTrim's synergistic blend of ingredients therefore supports many aspects of healthy fat metabolism, which, in turn, may promote higher energy levels. #
