

L-Glutamine™ is the most abundant amino acid in the body (including the brain, muscle and blood). The concentration of free glutamine appears to influence whether muscles will be broken down (catabolism - low glutamine content) or built up (anabolism - high glutamine content).** Glutamine acts as a "nitrogen shuttle" by picking up and dropping off nitrogen around the body. Nitrogen is an essential component of DNA and vital for building muscle.** Glutamine is a prominent contributor to the functional integrity of the intestines and serves as an energy source for these highly active cells.** Overall, **L-Glutamine™** supports muscle growth and recovery, immune and intestinal health, and preserves muscles after intense training and during times of stress or sickness.**
